

**NY-3: Shingle Hollow, Hoosick,
NY: along Route 7 in Tibbitts
State Forest**

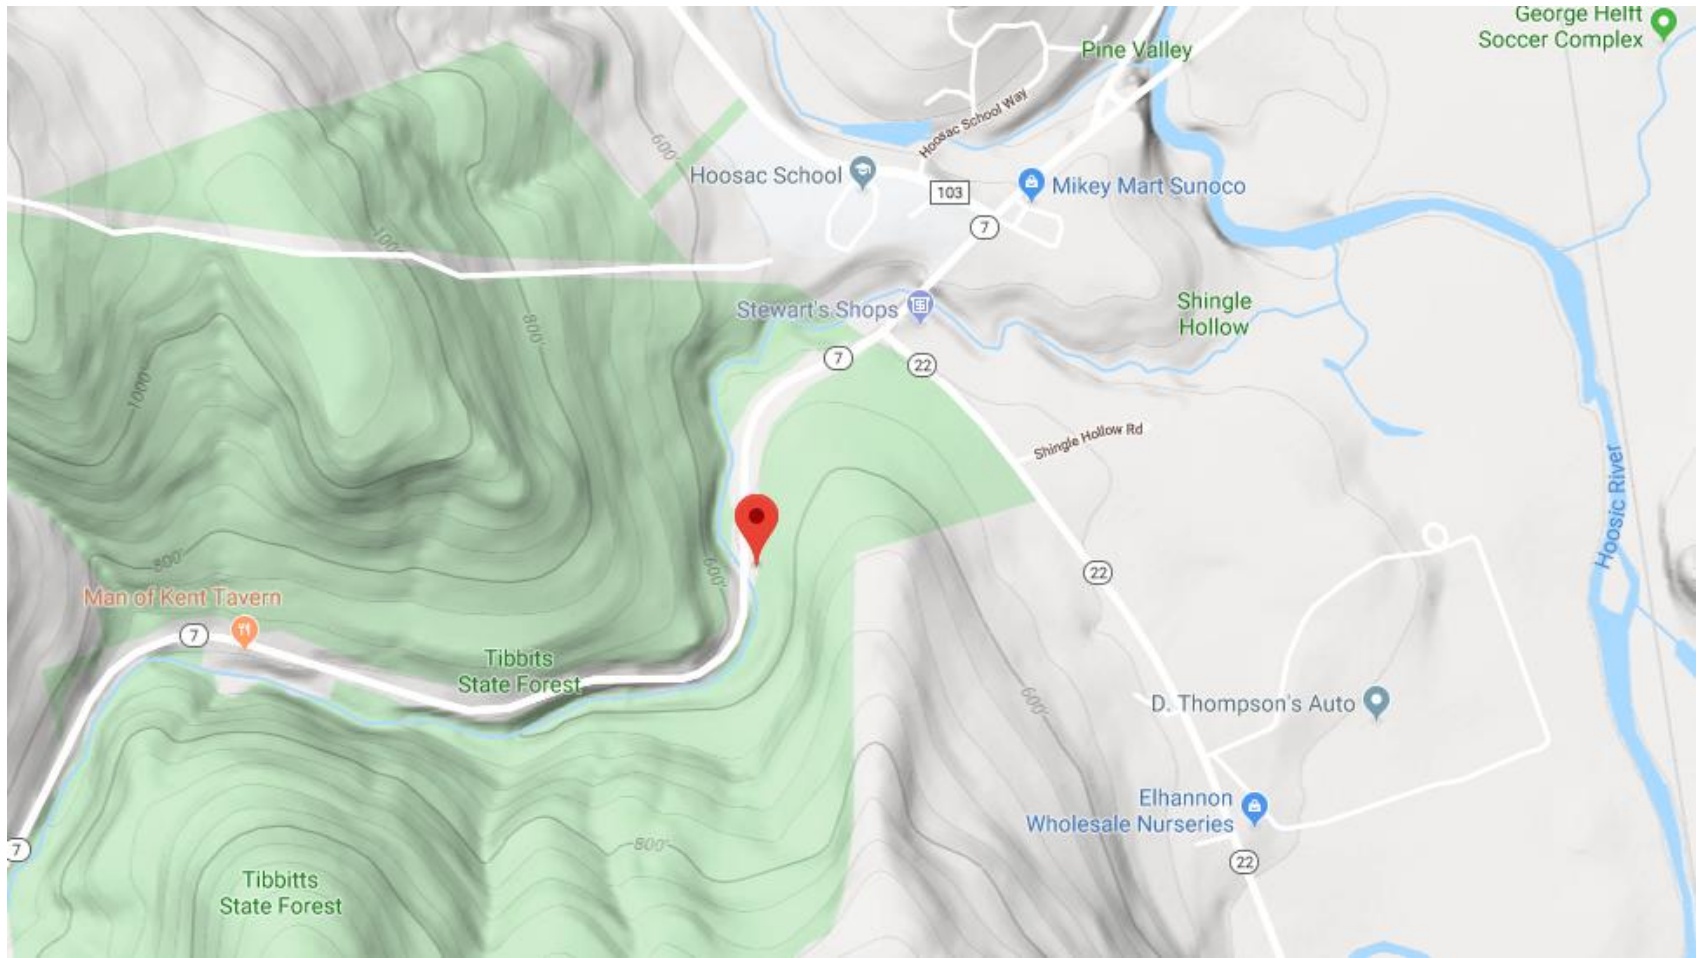

N42.8476 W73.3503

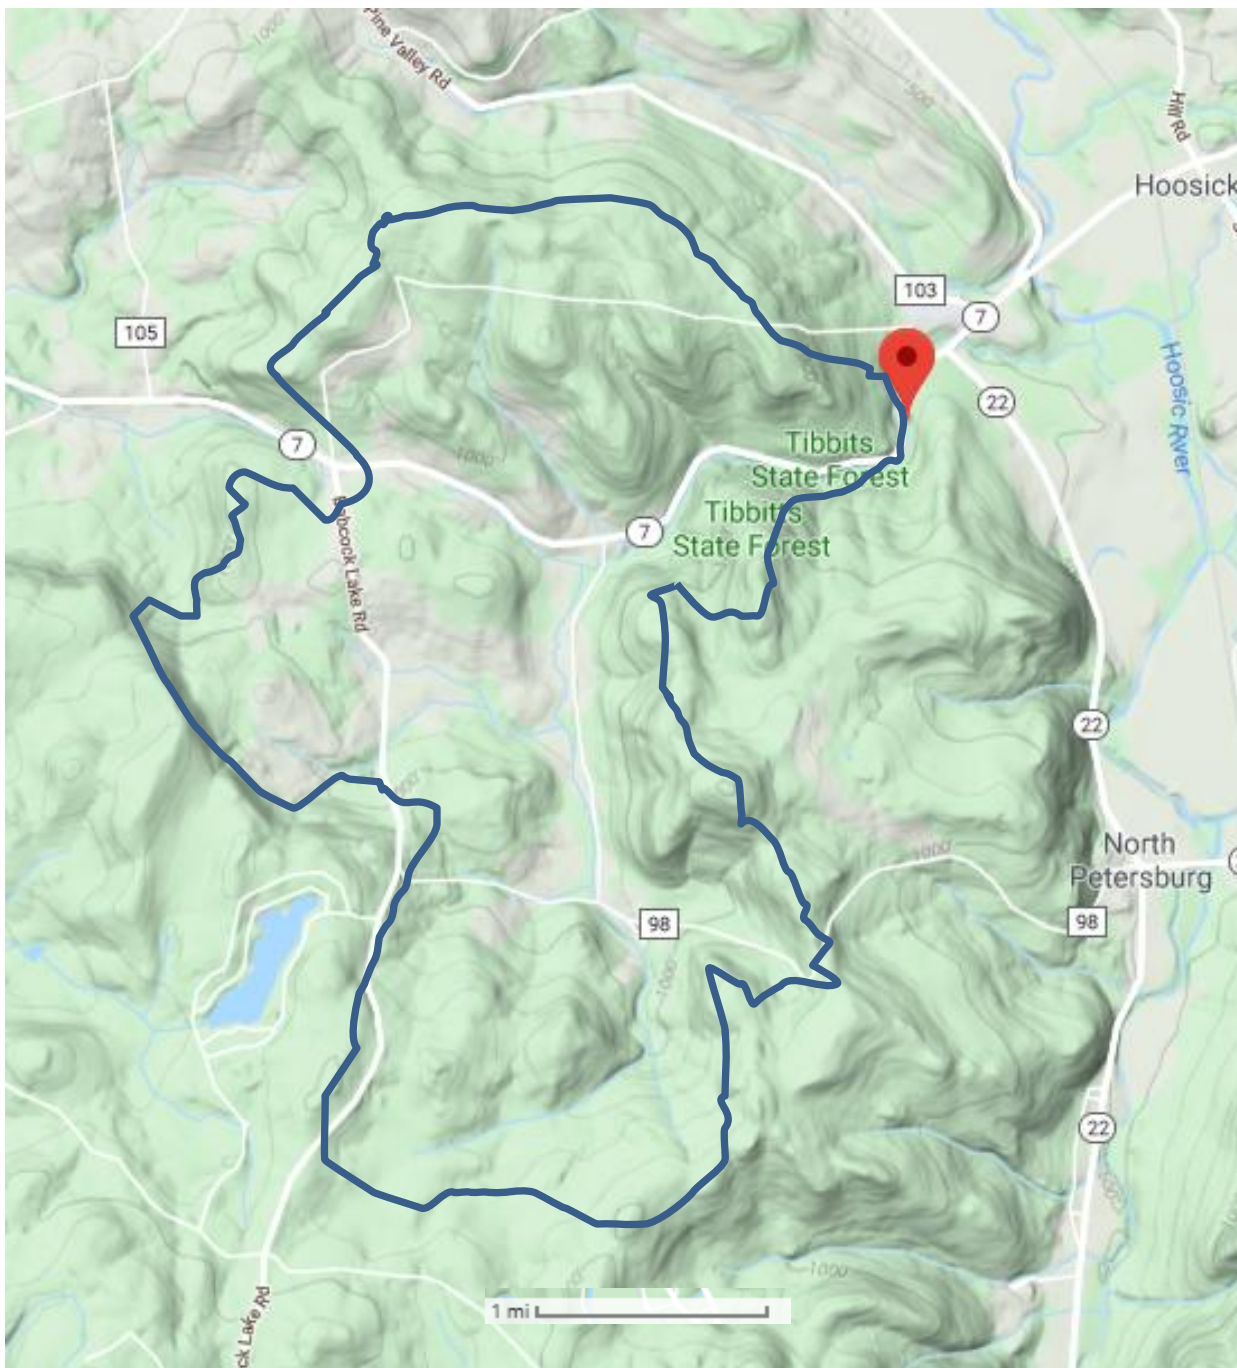

Fred collecting sand along
Shingle Hollow

**Coarse-grained, poorly sorted stream
sand composed primarily of subangular
rock fragments (FOV ~ 5mm across)**

Provenance area for Shingle Hollow is only a few square miles.

Mapped as mostly Cambrian to Ordovician meta-sedimentary rocks exposed in thrust sheets associated with the Taconic orogeny. Quartzites form ridges.
